ACTONIX

M365

AUDIT AND STATE

One Platform. Every Answer. Total Current-State Visibility.

ACTONIX

Actonix is a high-performance governance engine designed to replace the complexity of native Microsoft 365 logging with clear, actionable, and secure insights. We provide a single-pane-of-glass view across the entire cloud productivity suite.

Holistic Cloud Visibility

Consolidate data from across the Microsoft stack into one unified dashboard. Stop toggling between admin centers and start managing your environment from a position of total awareness.

- **Infrastructure Coverage:** Seamless monitoring of Microsoft Entra ID (Azure AD), Exchange Online, SharePoint, OneDrive for Business, and MS Teams.
- **The "Four W" Engine:** Every event is mapped to Who acted, What was modified, When it occurred, and Where the change originated.

Data Access & Privacy Shield

Protect what matters most. Actonix identifies exactly how your sensitive information is being handled, helping you prevent internal leaks and external breaches.

- Intervention for Non-Owner Access: Specifically track and alert when mailboxes or files are accessed by anyone other than the assigned owner.
- External Sharing Intelligence: Real-time auditing of data shared via public links, private channels, or individual chats to ensure zero-trust compliance.
- Sensitive Data Tracking: Monitor interactions with high-value assets in SharePoint and OneDrive to identify anomalous behavior patterns.

ACTONIX

Privilege & Identity Governance

Right-size your permissions. Actonix helps you implement the Principle of Least Privilege (PoLP) by identifying where your security posture is over-extended.

- **Excessive Rights Reporting:** Automatically flag users who possess permissions they aren't actively utilizing.
- **Privilege Evolution Tracking:** Audit every permission change to understand how your privilege model is shifting over time.
- **Entra ID Integrity:** Monitor group membership changes and administrative role assignments to prevent "privilege creep."

Collaboration Security (MS Teams)

Secure the modern workspace. As Teams becomes the hub for business, Actonix provides the guardrails necessary to keep it secure.

- **Lifecycle Auditing:** Track the creation of new teams, channels, and sessions.
- **Interaction Analytics:** See how users are communicating and whether sensitive information is being moved through collaboration channels.

ACTONIX

Advanced Analytics & Customization

Data your way. Actonix moves beyond static lists, offering dynamic tools to slice and dice your tenant data.

- **Deep-Dive Filtering:** Use advanced multi-layer sorting to isolate specific events in seconds, even in high-volume environments.
- **Bespoke Reporting:** Tailor your audit views to meet the specific requirements of your CISO, IT Manager, or external auditors.
- **Audit-Ready Compliance:** Pre-configured modules designed to satisfy the rigorous reporting demands of GDPR, HIPAA, and PCI-DSS.
