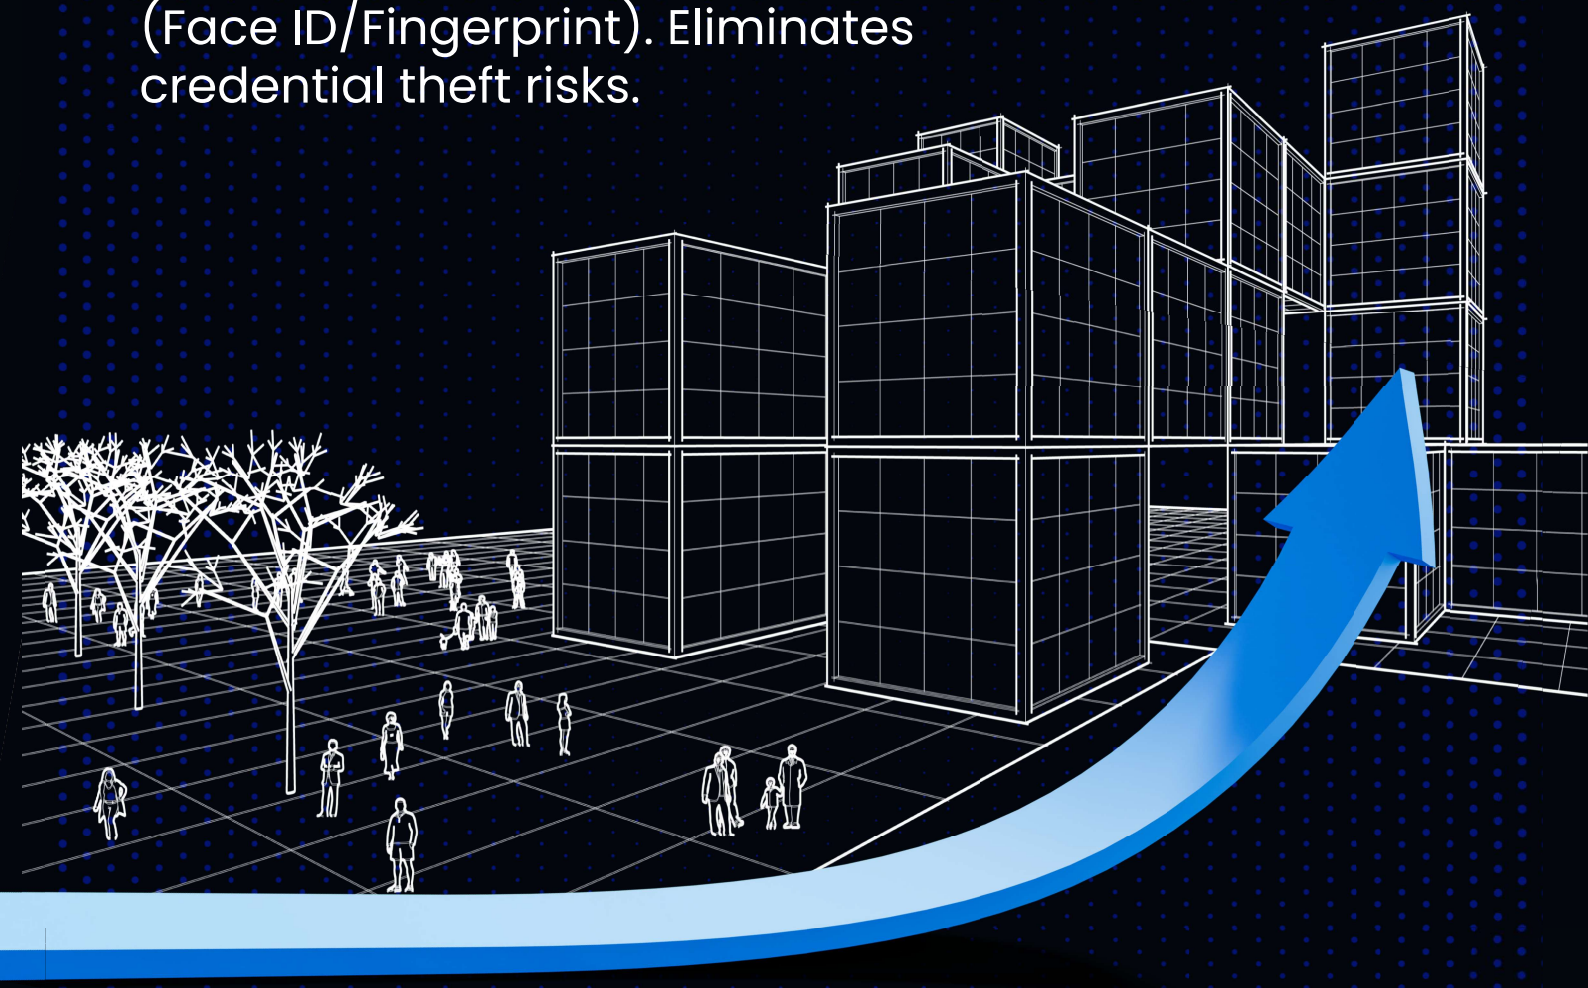
ACTONIX

# SELF-SERVICE
## PASSWORD RESET (SSPR)

Phishing-resistant FIDO2/WebAuthN security utilizing device biometrics (Face ID/Fingerprint). Eliminates credential theft risks.



### *Highlights*

- Passwordless (Passkeys)
- Secure Password Vault
- Zero-Knowledge Architecture

ACTONIX

## Self-Service Password Reset (SSPR)

Stop letting forgotten passwords stall productivity. Actonix SSPR allows users to securely reset their own credentials or unlock their accounts without a single call to IT. Whether they are at their desk or on a mobile device, recovery is just a few clicks away.

Logon Screen Integration: Users can reset passwords directly from the Windows logon screen or any web browser.

Multi-Factor Verification: Ensure identity security through Google, Microsoft, or RSA MFA before allowing a reset.

24/7 Availability: Automated recovery means your team stays productive even outside of standard IT support hours.

## Automated User Enrollment

Instant onboarding, zero friction.

Get new hires up and running on day one. Actonix automatically registers users for the services they need based on your predefined rules. By eliminating manual intervention, you ensure immediate access to critical tools and a professional first-day experience.

Zero Wait Times: No more waiting for manual ticket processing or admin approval for standard access.

Error-Free Setup: Consistency is guaranteed through automated profiles that match your organizational structure.

ACTONIX

## Passwordless Login

Experience faster, phishing-resistant security with Actonix Passkeys.

Users don't have to remember complex passwords, or need to search for a second factor code, greatly improving user experience. Instead they will get to login faster, with a more secure and easier login experience. Actonix leverages WebAuthN to authenticate you instantly using your device's native security—such as your fingerprint, face ID, or a hardware security key.

## Secure Password Vault

Actonix utilizes a Zero-Knowledge Architecture to ensure your sensitive credentials remain strictly yours. Every piece of data is encrypted directly on your device before it ever reaches our servers.

Why Zero-Knowledge Matters:

Local Encryption: Your master password and vault data are transformed into unreadable code on your hardware. We never receive the plain-text version.

Complete Privacy: Because we don't hold the keys to your encryption, Actonix has "zero knowledge" of your stored passwords. Even in the unlikely event of a system breach, your data remains encrypted and useless to intruders.

User-Centric Control: You are the only person with the power to unlock your vault. This ensures that your digital identity is protected from third parties—including us.

ACTONIX

## Directory Self-Update

Real-time data accuracy, managed by the source.

Keep your Active Directory and HRMS data pristine by allowing users to manage their own profile information. When a user updates their contact details in the Actonix portal, the changes sync across your ecosystem automatically.

Verified Updates: Require verification (like a mobile code) before sensitive fields like phone numbers or addresses are changed.

Reduced Admin Burden: Free your IT and HR teams from the tedious task of manual data entry for basic profile changes.

## Password Quality Check

Actonix moves beyond basic strength checks to ensure true credential safety. By cross-referencing billions of leaked credentials in real-time, we prevent the use of passwords already compromised in third-party breaches.

Key Capabilities:

Real-Time Detection: Instantly flags credentials found in global breach repositories.

Automated Response: Force password resets immediately upon threat detection.

Privacy-First: Advanced cryptographic hashing ensures passwords remain private and secure during verification.

Neutralize Reuse: Eliminates risks from users recycling passwords across multiple platforms.
