Features That Help You Adapt to Every Scenario

Passwordless MFA for Workforce Productivity

- Eliminates password management struggles with Authenticators, Push notifications, OTPs etc.
- Enhances workforce productivity by delivering hassle-free security measures.

Offline MFA

- Enable secure authentication even without internet connectivity.
- Users can verify their identity using soft tokens, authenticator apps, or backup codes—ensuring access remains protected, anytime, anywhere.

Extensive Reporting, Analytics, & Compliance Support

- Access audit logs, session management and user activity reports from one dashboard.
- Ensure compliance with regulations like GDPR, HIPAA, SOX, and more.

Role-Based Authentication Policies

- Assign specific 2FA requirements based on user roles or application needs.
- Streamline access management without compromising security.

MFA Use - Cases

VPN-RADIUS Authentication

Enhance your VPN security with multi-factor authentication by integrating miniOrange as your trusted RADIUS server, ensuring robust protection against unauthorized access.

MFA for Windows Logon & RDP Access

Enhance Windows security with 2FA for local logins and Remote Desktop Protocol (RDP). miniOrange Credential Provider integrates seamlessly for extra protection.

TACACS+ Support for Robust Access Control

Leverage miniOrange's native TACACS+ support for robust access control with Authentication, Authorization, and Accounting (AAA) services, enhancing monitoring and administration.

MFA for Linux Logon & SSH Access

Fortify Linux servers with 2FA on SSH access to enhance identity verification and mitigate risks of brute-force attacks, improving overall system security.

MFA for Virtual Desktop Infrastructure (VDI)

Secure virtual desktop environments with 2FA, ensuring protected access, streamlined administration, lower operational costs, and optimized IT resource utilization.

Standard MFA for Web Apps & Legacy Systems

Integrate modern security protocols seamlessly into your web apps and legacy systems, like Oracle EBS, QlikView, and Siebel CRM, without disrupting operations.
